## Coating Machine Geotextiles M2222-35

Geotextiles, in particular Geogrids, are preferably used for road construction. Applied below the asphalt covering, Geogrids stabilize the total construction and absorb physical loads from the road covering. In addition they are used as armoring in bridge, tunnel construction as well as support for headwalls and batters. Menzel is the supplier of online and offline coating ranges for Geogrids. The machines are manufactured up to a width of 6.400 mm and offer highest flexibility to cope with the market requirements.
